

More monitoring  
of your treatment,  
but fewer  
appointments

## DENTAL MONITORING™

Dental Monitoring is an exciting new 3D technology now available at Profile Orthodontics.

Dental Monitoring allows us to monitor your progress remotely, reducing the number of appointments required and saving you valuable time. Any changing conditions can also be quickly identified and addressed as they occur, rather than waiting until your next scheduled visit.

We can track and evaluate your treatment in real-time, using exclusive 3D matching technology to compare a 3D model of your initial tooth position with the progressive photos you submit.

### BENEFITS

- fewer visits means less time off work or school
- your treatment is monitored between appointments
- monitors your dental hygiene
- may shorten your treatment time

Simply download the DM app to your smartphone, then you'll be regularly reminded to take photos of your teeth while using the DM cheek retractor provided.

#### Get ready for Dental Monitoring

**Open** the email you receive from Dental Monitoring.

**Click** on either the iPhone **or** Android link

**Download**  
the app for  
**Dental Monitoring**

**Click on**

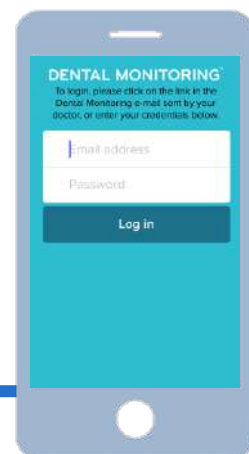

Demo mode and tutorial  
Train without sending photos to your doctor

**Watch** the video tutorial prior to your next appointment.

**Open the app**  
on your phone

**Select Enable Notifications**  
**then select Allow**

**Login**  
using your **email address** and  
the **password** sent via email

At your next appointment you will receive the cheek retractors and further instruction on using the DM app.
